# MISSISSIPPI STATE DEPARTMENT OF HEALTH3 JUL - 1 AM 9: 46 BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION FORM CALENDAR YEAR 2012

|                                       | List PWS ID #s for all Community Water Systems included in this CCR   |
|---------------------------------------|---|
| The Cor syst cust of e                | e Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute nsumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water tem, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the tomers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please that apply.  |
|                                       | Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)  |
|                                       | Advertisement in local paper (attach copy of advertisement)  On water bills (attach copy of bill)  Email message (MUST Email the message to the address below)  Other   |
|                                       | Date(s) customers were informed:/,/   |
| X                                     | CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used  |
|                                       | Date Mailed/Distributed: 6 /28/13   |
|                                       | CCR was distributed by Email (MUST Email MSDH a copy)  As a URL (Provide URL  As an attachment  As text within the body of the email message  |
|                                       | CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)  |
|                                       | Name of Newspaper:  |
|                                       | Date Published:/  |
|                                       | CCR was posted in public places. (Attach list of locations)  Date Posted: / /   |
|                                       | CCR was posted on a publicly accessible internet site at the following address ( <b>DIRECT URL REQUIRED</b> ):  |
| heroubliche S<br>he S<br>he v<br>Depa | reby certify that the 2012 Consumer Confidence Report (CCR) has been distributed to the customers of this ic water system in the form and manner identified above and that I used distribution methods allowed by SDWA. I further certify that the information included in this CCR is true and correct and is consistent with water quality monitoring data provided to the public water system officials by the Mississippi State artment of Health, Bureau of Public Water Supply.    Judity   Judity |

# 2013 MAY -3 PM 3: 42

2012 Annual Drinking Water Quality Report Bear Creek Water Association, Inc. PWS ID#:0450021 & 0450002 April 2013

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Cockfield Formation, Sparta Sand Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Bear Creek Water Association have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact H. A. "Tony" McMullen, Jr. at 601-856-5969. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held by the 10<sup>th</sup> of each month at 5:00 PM at 301 Distribution Dr., Madison, MS 39110.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1st to December 31st, 2012. In cases where monitoring wasn't required in 2012, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

As you can see by the table, our system had no contaminate violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the BEAR CREEK W/A-WEST is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 10. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 91%.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the BEAR CREEK W/A -EAST is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 11. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 90%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

### \*\*\*\*\*April 1, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING\*\*\*\*\*

In accordance with the Radionuclides Rule, all community public water supplies were requires to sample quarterly for radionuclides beginning January 2007 – December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 601.576.7518.

The Bear Creek Water Association works continuously to provide top quality water to every tap. Bear Creek has received an excellent score with MS State Department of Health for capacity development. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a sale and dependable supply of drinking water we wantiyou to inderstand the efforts we make to continually improve the water treatment process and project our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Cockfield Formation, Sparta Sand Aquillers.

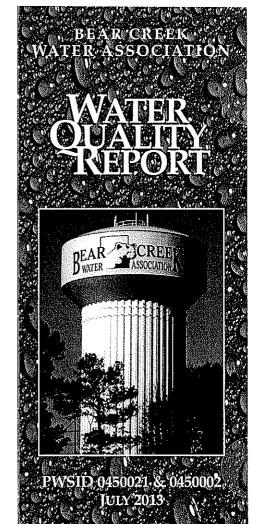

The source water assessment has been com-The source water assessment has been completed for our public water eystem to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Bear Creek Water Association have received lowestor moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact H: A. "Tony" McMullen, Ir, at 601-856-5969, We want our valued customers to be informed about their water utility. Beyou want to learn more, please attend any of our gregularly scheduled meetings. They are held by the 10th of each month at 5:00 PM at 301 Distribution Dr., Madison, MS 39110.

ulea meetings. They are held by the 10th of each month at 5:00 PM at 301 Distribution Dr., Madison, MS 30110.

We nothingly monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1st to December 31st, 2012. In cases where monitoring wasn't required in 2012, the table reflects the most agent results, As water trayels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, ratioactive maleriels and can pick in substances or contaminants from the presence of animals or from Juman activity interobal contaminants, such as viruses and bacteria; that may come from sewage treatment; plants, septic systems, aggreeithural livestock operations, and wildlife; horganic contaminants, such as salts and metals, which can be naturally occurring or result from union storm-water runoff, industrial, or domestic wasterwater discharges, oil and gas production, mining, or familing pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic, chemical contaminants, sincluding synthetic and volatile organic chemicals, which are by-products of industrial processes are petroleum production, and on also come from gas stations and septic organic chemicals, which are by-products of industrial processes are petroleum production, and on also come from gas stations and septic yestems; radioactive contaminants, which can'be naturally occurring or be the result of oil and gas production and mining activities in order to crisure that tap water is safe to drink, EPA prescribes negulations, that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, including bottle water poses a health risk.

Envigronmental Protection Agency's Safe Urnking Water stroume at \$1,800.426,979.

Sono peoplessay be anner unherable to contaninants in drinking water than the general population. Immune-compronised gersons such as persons with cancer undergoing themotherapy, persons who have undergoine organ ransplants, people with JHV/AIDS or differ infinume system disorders, some elderly, and infants can be particularly at Tisk from infections. These people should xeek advice about Tenhakur water from their healthcare providers. FPA/CDC guidelines on appropriate means to lessen the risk of indextion by cryptosportion and other microbiological contaminants are available from the \$40 Draking Water Hottlips 1,800.428,4791.

APRIL 1, 2013 A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING
In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled decadline; however, during an audit of the Mississippi State Department of Health Radiological health laboratory, the Environmental Protection Agency (EPA) suspended analyses and respiting of radiological compliance as with further under. Although this was not the result of inaction by the public water supply. MSDH was required to issue a violation. This is to notify you that your water system has completed the monitoring requirements andsnow in compliance with the Radionachides Rule. If you have any questions, please contact Acare Walters, Director of Compliance & Euforcement, Bureau of Public Water Supply, at 6915/67-318.

The Bear Creek Mater Association works continuously to provide top quality water to every tap. Bear Creek has received an excellent score with MS State Department of Health for capacity development. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

<sup>\*</sup> Most recent sample. No sample required for 2012.

\*\* Fluoride level is routinely adjusted to the MS Stole Dept of Health's recommended level of 0.7 - 1.3 mg/l

#### Certification

The mailer's signature certifies acceptance of liability for and agreement to pay any revenue deficiencies assessed on this mailing, subject to appeal. If an agent signs this form, the agent certifies that he or she is authorized to sign on behalf of the mailer, and that the mailer is bound by the certification and agrees to pay any deficiencies. In addition, agents may be liable for any deficiencies resulting from matters within their responsibility, knowledge, or control.

I hereby certify that all information furnished on this form is accurate, truthful, and complete; that the mail and the supporting documentation comply with all postal standards and that the mailing qualifies for the prices and fees claimed; and that the mailing does not contain any matter prohibited by law or postal regulation.

understand that anyone who furnishes false or misleading information on this form or who omits information requested on the form may be subject to criminal and/or civil penalties, including fines and imprisonment.
